ABSTRACT
This paper gives a brief overview of my background.

AUTHOR KEYWORDS
empathy; self-reflection; mental health; prototyping; user experience; hcixb.

ABOUT ME
I hold an undergraduate degree in visual computing and design and am currently addressing my master thesis in recognizing and regulating mental health symptoms via mobile sensing /biofeedback. After researching how an empathy app can help Syrian refugees integrate into German society, I ask myself how technology can help students to overcome their mental health obstacles. I am currently exploring opportunities to collaborate in an entrepreneurial and technological context within the fields of mental health. Whilst completing my M. Sc. in Technical Entrepreneurship and Innovation, I aim to impact and help the youth of today who are the most prevalent to mental health symptoms in Germany.

AWARDS & WORK EXPERIENCE

- 2nd place of Lippstadt's founder's ideas competition – 2019
- Receiver of the Campus Start-Up scholarship – 2018
- Finalist of the CHI Student Design Competition – 2017
- Receiver of the "German scholarship" – 2015
- Over 5 years of startup experiences in developing and designing digital interventions
